

**911 RIGHT-OF-WAY MARKERS**

Right-of-way markers consists of the furnishing by the Contractor of all materials, except the brass caps, and installing right-of-way markers and reference markers in conformance with the Plans, applicable statutes, and procedures per the minimum standards for boundary surveys set forth by the Arizona Board of Technical Registration.

Considerable care should be taken in setting right-of-way markers and survey monuments, as they become permanent control points for future survey work.

Right-of-way markers are set in cast-in-place concrete. The Department will furnish the brass caps for the markers and after completion of the monument the Contractor will establish the survey point on the marker.

The reference markers are painted, lettered, and installed as shown on the plans or as directed.

Normally, the engineer will furnish the Contractor with a list of required information to be painted on the reference markers. The stations should be determined and established by the Contractor as soon as possible.

The same precautions mentioned in Section 909 for survey monuments should be observed when staking for right-of-way monuments.
